

# Regional Spine Center at OMNI

Part of our  
growing team  
of excellence

OMNI Orthopaedics is pleased to announce the opening of OMNI Regional Spine Center, offering comprehensive care for the complex system of vertebrae, joints, discs and nerves that make up the spine.

**Mark Cecil, M.D.**  
Spinal and Scoliosis  
Surgery Specialist

## OMNI Regional Spine Center – Advanced, comprehensive care for the spine

The OMNI Regional Spine Center brings together a team of specialists highly trained in the diagnosis and treatment of all diseases and disorders that affect the spine, including fractures, infections, deformities, tumors and arthritis. These physicians, therapists and support staff, including a rehabilitation psychologist, are able to treat most back injuries and illnesses with the most appropriate approaches, both surgical and non-surgical, including physical therapy, exercise and changes in lifestyle.

### Outstanding expertise & centralized care

The OMNI Regional Spine Center offers fully integrated care for back pain, a condition which causes more disability in people up to age 45 than any other ailment. The creation of such an all-inclusive center allows for improved patient care. This is accomplished through direct communication and interaction among the specialists, meeting regularly to discuss every patient's unique situation and needs.

### Visit OMNI Regional Spine Center for:

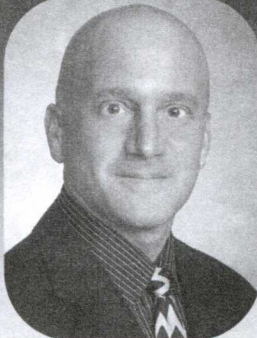

- surgical evaluation and treatment of the lumbar, thoracic and cervical spine
- treatment of prior failed surgery
- spinal reconstruction
- rehabilitation
- psychological support and adjustment
- electrodiagnostic and MRI services
- patient education
- non-surgical approaches...physical therapy, lifestyle changes, back-strengthening exercises

### We treat the following disorders:

- athletic injuries
- spinal arthritis
- osteoporosis
- acute back strain
- herniated discs
- spinal degeneration
- spinal deformity
- fractures
- bone cancer and related tumors
- work related injuries and strains
- acute back and chronic pain
